

2. Requirement Analysis

Project Module: Laptop Request Process

Description: Detailed analysis of business logic requirements, user personas, variable , and process constraints.

This document serves as the formal milestone artifact for the ServiceNow development workflow lifecycle.

Functional Requirements

- **Intake Form:** A **Service Catalog Item** with 3 fields: requested_for, laptop_type, and business_justification.
- **Data Lock:** Fields become **read-only** after submission to prevent user changes. **Auto-Workflow:** Submission instantly starts a custom.
- **Flow Designer** engine. **Stage Tracking:** Updates request status automatically (e.g., Waiting for Approval, Fulfillment).
- **Manager Approval:** Routes a **sysapproval_approver record** to the manager; pauses IT tasks until approved.
- **Email Alerts:** Sends custom **HTML/CSS notifications** when approved or rejected. **IT Task Creation:** Generates a **Fulfillment Task (sc_task)** automatically after approval.
- **Hard Dependency:** The parent request stays open until the IT tech closes the setup task as **Closed Complete**.
 - **Service Catalog:** To provide a clean, user-friendly online form where employees can easily select their laptop and submit requests without using manual paper or emails.
 - **Flow Designer:** To fully automate the background process, handling manager approvals, stage updates, and IT task assignments step-by-step without writing complex code.
 - **Flow Designer:** To fully automate the background process, handling manager approvals, stage updates, and IT task assignments step-by-step without writing complex code.

Service Catalog Variables Map

Field Name (Variable)	Field Type	Why We Used It (Purpose)
requested_for	Reference	Automatically pulls and links the user's name from the system database (sys_user).
laptop_type	Choice	Gives a clear dropdown menu (MacBook, Dell, ThinkPad) so users can only pick available models.
business_justification	Text	Provides a mandatory text box for the user to explain why they need the device for their role.

System Architecture & Scoped App Constraints

- **Scoped App Isolation:** Built inside a dedicated custom scope to keep all tables and templates safe from global platform conflicts.
- **Flow Designer Native:** Runs fully on **Flow Designer data pills** instead of old, messy scripts.
- **Process Gate:** The system blocks `sc_task` creation entirely until the manager approval token is cleared.

Visual Implementation Evidence

1. Navigate to **Service Catalog > Catalog Items** and open the custom **Laptop Request** item.
2. Scroll down to the **Related Lists** section and click on the **Variables** tab.
3. Click the **New** button to initiate variable creation.

The screenshot shows the 'Catalog Item' form for 'Laptop Request'. The form includes fields for Name, Application, Category, State, Checked out, and Owner. The 'Name' field is 'Laptop Request', 'Application' is 'FlowDesk', 'Category' is 'Can We Help You?', 'State' is '-- None --', 'Checked out' is '-- None --', and 'Owner' is 'System Administrator'. The 'Active' checkbox is checked. The 'Fulfillment automation level' is 'Unspecified'. Below the form, there are tabs for 'Item Details', 'Process Engine', 'Picture', 'Pricing', and 'Portal Settings'. The 'Short description' field contains 'Request a laptop for official business rule.' and the 'Description' field is empty.

The screenshot shows the 'Related Lists' section for 'Laptop Request'. It includes a table with columns 'Type', 'Question', and 'Order'. The table contains three rows: 'Reference' (Requested for), 'Select Box' (Laptop type), and 'Multi Line Text' (Business Justification). The 'Order' values are 100, 200, and 300 respectively. The 'Variables (3)' tab is selected, and the 'New' button is visible.

Type	Question	Order
Reference	Requested for	100
Select Box	Laptop type	200
Multi Line Text	Business Justification	300

4. Set the configuration settings for each variable as defined below:

Requested for: Select Type as **Reference**

Laptop type: Select Type as **Select Box**

Business Justification: Select Type as **Multi Line Text**

5. Set the respective **Order** values (100, 200, 300) to align them sequentially on the form layout.

6. Click **Submit / Update** to save the fields.
